

# 12-core armored communication optical cable

## Article Overview

A 12-core armored optical cable is a robust fiber optic solution designed for outdoor, underground, and industrial applications, offering mechanical protection, water resistance, and high data transmission reliability.

### Cable Structure and Materials

A typical 12-core armored fiber optic cable consists of the following components:

- Fiber Cores: 12 single-mode or multimode fibers, often 9/125 $\mu$ m for single-mode, arranged in loose tubes to allow stress-free movement .
- Loose Tubes: High-modulus plastic tubes filled with water-blocking gel or compounds to prevent moisture ingress .
- Central Strength Member: Steel wire or rod at the core center provides tensile strength and strain resistance .
- Armoring: Steel tape or metal armor layer protects against crushing, rodent attacks, and accidental impacts during installation . TPU jackets are also used for abrasion, UV, and chemical resistance in industrial environments .
- Outer Jacket: Dual or single HDPE or TPU jackets provide environmental protection, UV resistance, and mechanical durability .

### Key Specifications

- Installation Type: Suitable for direct burial, duct, or outdoor aerial deployment ....
