

192 Fiber Optic Distribution Box

Article Overview

A 192-core fiber optic distribution box is a high-capacity enclosure designed for splicing, splitting, and distributing optical fibers in FTTH, FTTB, and FTTx networks.

Overview

A 192-core fiber optic distribution box serves as both a termination and splice point, connecting feeder cables to distribution cables. It integrates fiber splicing, signal splitting, and cable distribution within a secure enclosure suitable for indoor or outdoor use. These boxes are widely used in telecommunication networks, CATV systems, and data communication networks, providing reliable protection for optical cables and pigtails.

Key Features

- **Capacity:** Supports up to 192 fiber cores and multiple splice trays (commonly 8 trays for 24-core splicing each) for high-density fiber management.
- **Material:** Available in engineering plastic (UV and impact resistant) or galvanized/metal steel for mechanical protection.
- **Protection:** Outdoor models often have IP53 to IP65 ratings, UV resistance, and lockable doors for security.
- **Splitter Support:** Can house 1:8 splitters or other configurations for optical signal distribution.
- **Adapters:** Supports pre-terminated SC or LC adapters, including waterproof options for outdoor installations.
- **Installation:** Suitable for wall-mounted or pole-mounted setups, with compact desi...
