

2-core fiber optic terminal box

Article Overview

A two-core fiber optic terminal box is a compact enclosure designed for secure termination, splicing, and management of two optical fibers in FTTH or FTTx networks.

Overview

A two-core fiber optic terminal box serves as a termination point for optical fibers, connecting drop cables to optical network terminals (ONTs) or patch cords in residential, commercial, or enterprise networks . It provides a secure, organized space for splicing, termination, and fiber management, ensuring minimal optical loss and reliable signal transmission.

Key Features

- **Port Configuration:** Typically includes 2 input and 2 output ports, supporting SC or LC adaptors for flexible connector compatibility .
- **Material:** Constructed from durable ABS or flame-retardant PC plastic, offering protection against environmental factors, dust, and minor impacts .
- **Compact Design:** Small footprint (e.g., 105 × 82 × 25 mm) allows installation in confined spaces, wall-mounted or desktop .
- **Splicing Support:** Compatible with both mechanical and fusion splicing, as well as pigtail terminations .
- **Cable Management:** Internal routing maintains proper fiber bend radius and slack management, with multiple cable inlets for flexible installation .
- **Environmental Protection:** Some models are water- and dust-resistant, suitable for...
