

24-core MPO fiber optic patch cord

Article Overview

A 24-core MPO fiber optic patch cord is a high-density cable assembly that consolidates 24 optical fibers into a single MPO connector, enabling efficient, high-speed network connections in data centers and enterprise networks.

Overview

A 24-core MPO (Multi-Fiber Push-On) patch cord is designed to carry 24 individual optical fibers within a single rectangular connector ferrule, significantly reducing cable bulk and installation complexity compared to traditional LC or SC patch cords (MPO can house 8, 12, 16, 24, or more fibers) . These cords are pre-terminated and factory-tested for low insertion loss and high return loss, ensuring reliable optical transmission .

Fiber Types

24-core MPO patch cords are available in:

- Singlemode (SM): Optimized for long-distance, high-bandwidth applications .
- Multimode (MM): Commonly OM3 or OM4, suitable for high-speed data center links like 40G, 100G, and 400G Ethernet . The choice of fiber type depends on the network distance, bandwidth requirements, and transceiver compatibility.

Polarity and Connector Configuration

MPO patch cords use polarity types A, B, or C to ensure correct bi-directional signal...
