

50 meters of fiber optic cable

Article Overview

A 50-meter fiber optic cable is a versatile networking solution available in multimode or single-mode types, suitable for high-speed data transmission over medium distances.

Types and Specifications

- Multimode Fiber (50/125 μm): Commonly used for short to medium distances, such as within buildings or data centers. Supports high-speed data transfer, including 10 GB networks, and is available in OM3 or OM4 grades for higher bandwidth .
- Single-Mode Fiber: Designed for long-distance transmission with minimal signal loss, ideal for connecting buildings or across campuses.
- Connectors: Popular connector types include LC, SC, and MPO/MTP. Duplex cables have two fibers for simultaneous bidirectional data transfer, while MTP/MPO cables can support multiple channels in high-density setups .

Applications

- Data Centers and Enterprise Networks: Connect switches, routers, patch panels, and SFP/SFP+ transceivers for high-speed, low-latency communication .
- Telecommunications: Reliable transmission over medium distances without electromagnetic interference .
- Indoor/Outdoor Use: Pre-terminated cables can be used both indoors and outdoors, connecting different floors, rooms, or buildings, with robust protection for connectors and fibers
