

A Day in the Life of a Relay Protection Worker

Overview

A typical day for a Protective Relay Technician involves performing scheduled testing, calibration, and maintenance of protective relay systems in substations or industrial facilities. Actually sitting down in front of the gear and testing relays is a pretty good chunk of it, but they get asked to do a lot. They're often in. We're basically the IT department of the power system. To elaborate on this, I'll explain how a relay works in a basic sense and what it is that I do. A protective relay is a device that measures current and voltage on a power line and opens breakers when there is a fault somewhere on the line (at. What are the top challenges that a Protective Relay Technician might face in the first 90 days?

What does a day in the life of a Protective Relay Technician look like?

What are some tips for helping a Protective Relay Technician fit into the company culture?

What are some career development tips. What does a typical day look like for someone working in protection relay testing?

A typical day in protection relay testing involves planning and executing tests on protection relays to ensure proper operation and system reliability. You may review schematics, set up and operate test equipment. Ever wonder what it's like to work for PSE&G?

Hear from our relay tech, Jessi.
