

A type of ladder-style cable tray

Article Overview

A ladder-style cable tray is an open-structure support system with two side rails connected by rungs, designed to carry and ventilate heavy-duty electrical cables efficiently.

Structure and Design

A ladder-style cable tray consists of two longitudinal side rails connected by evenly spaced crossbars or rungs, giving it a ladder-like appearance . The rungs are often perforated to allow secure attachment of cables using ties or cleats. This open design ensures excellent airflow around the cables, which helps prevent overheating and reduces moisture or dust accumulation .

Materials

These trays are typically made from galvanized steel, aluminum, or stainless steel, providing durability, corrosion resistance, and suitability for both indoor and outdoor installations . The choice of material depends on environmental conditions and load requirements.

Applications

Ladder trays are ideal for heavy-duty power cables, long-span installations, and industrial environments such as power plants, refineries, and substations . They can support large cable bundles, instrumentation, and telecommunication cables, and allow cable entry and exit at any point, offering flexibility during installation . Their...
