

Adding a router to the telecom fiber broadband

Article Overview

To connect fiber optic broadband to a router, use an Optical Network Terminal (ONT) to convert the fiber signal to Ethernet, then link it to your router's WAN port.

Required Equipment

- Optical Network Terminal (ONT): Provided by your ISP, it converts the incoming fiber optic light signal into an electrical signal your router can use .
- Fiber optic cable: Typically single-mode with SC/APC or SC/UPC connectors, connecting the ISP's fiber outlet to the ONT .
- Ethernet cable (Cat6 or Cat6a recommended): Connects the ONT to the router's WAN/Internet port .
- Fiber-ready router: Ensure it supports gigabit speeds or higher, ideally Wi-Fi 5 (802.11ac) or Wi-Fi 6 (802.11ax) for optimal performance .

Step-by-Step Connection Process

- Locate the fiber optic wall outlet where the ISP's fiber line enters your home or office .
- Connect the fiber optic cable from the wall outlet to the ONT's designated optical port. Remove protective caps and handle the connector carefully to avoid dirt or damage .
- Power on the ONT using the provided adapter and wait for the status lights to stabilize, indicating a successful connection to the ISP network .
- Link the ONT to your router using an Ethernet cable. Plug one end into the ONT's...
