

American Optical Line Terminal DML

Overview

8 GPON Ports: Supports 1:128 splitting ratio for every port—up to 1024 ONTs by one device. High-Speed Uplink Ports: Provides 2× 10GE SFP+ ports and 1× gigabit uplink port. An optical line termination (OLT), also called an optical line terminal, is a device which serves as the service provider endpoint of a passive optical network. The laser driver provides optimum performance with reliable dual loop extinction ratio control and eye-shaping. A compliant. Explore our range of high-quality GPON, EPON, and XG (S)PON OLT products. Find the perfect Optical Line Terminal solutions for your network needs. Their main functions include. Directly modulated semiconductor lasers are optoelectronic devices that convert electrical signals into modulated optical signals without requiring external modulation components.

Optical line termination

An optical line termination (OLT), also called an optical line terminal, is a device which serves as the service provider endpoint of a passive optical network. It provides two main functions: 1. to perform conversion between the electrical signals used by the service provider's equipment and the fiber optic signals used by the passive optical network.
