

Are cable trays also flanges

Article Overview

Cable trays are not flanges, but some cable trays feature flanged edges for structural support and cable protection.

Understanding Cable Trays

A cable tray is a structural system used to support and organize electrical cables in buildings, industrial facilities, and commercial installations. They provide an open or ventilated pathway for power, control, and communication cables, allowing easy installation, maintenance, and future expansion without the need for enclosed conduits or pipes (Wikipedia) . Cable trays come in various types, including ladder trays, ventilated trays, and solid-bottom trays, each designed for specific cable management needs (Wikipedia) .

Role of Flanges in Cable Trays

Some cable tray systems, such as the SPB-RF and SPB-LB models, include return flanges along the sides. These flanges are raised edges that help prevent cables from slipping off the tray, provide additional structural strength, and reduce the risk of cable damage during installation or operation (Oglaend System) . However, these flanges are part of the tray design and are not standalone flanges used for connecting pipes or equipment.
