

Are high-voltage plastic distribution boxes safe

Overview

Engineering thermoplastics like polycarbonate and epoxy-coated steel are very safe and strong. Pick the right material for your distribution box. Inside these boxes, you've got some key parts like circuit breakers, transformers, and protective relays. HV Junction Boxes and Electrical Enclosures manufactured by Abtech are engineered for the safe distribution, cable termination and protection of high voltage. High Voltage Switchgear Cabinets (HVSC) play a crucial role in modern electrical infrastructure, acting as the backbone for effective power distribution and control. The emergence of high voltage switchgear technology has significantly improved safety, reliability, and efficiency in energy. Metal distribution boxes, made from galvanized steel, stainless steel, or aluminum alloys, offer superior mechanical strength, fire resistance, thermal stability, excellent heat dissipation, grounding capability, and electromagnetic interference shielding. However, their safety is a topic of ongoing debate. The enclosure serves a critical dual purpose in every modern power network globally.
