

Autonomous Aggregation Switch

Overview

They support link aggregation protocols such as Link Aggregation Control Protocol (LACP) and Static Link Aggregation, which allow multiple physical links to be combined into a single logical connection. By bundling multiple network connections into a single high-bandwidth link, aggregation switches help. An aggregation switch is a network device that consolidates traffic from multiple access switches, wireless access points, or other edge devices and forwards it to core switches or routers. ai is an intelligent edge platform that combines AI/ML compute, containerized apps, and autonomous network management in a single aggregation layer Ethernet switch. Faster replacement and priority support, covered for 5 years. High-performance 10G SFP modules for optimal connectivity.
