

Bare fiber optic cable connected to FC interface

Article Overview

A bare fiber can be temporarily connected to an FC interface using a bare fiber adapter or terminator, which secures the fiber and aligns it with the FC ferrule for low-loss optical transmission.

Understanding FC Connectors

FC (Ferrule Connector) connectors are threaded fiber-optic connectors designed for high-vibration environments and single-mode fibers. They feature a 2.5 mm ceramic or stainless steel ferrule with a polished tip for physical contact, ensuring low insertion loss and minimal back-reflection. FC connectors are commonly used in telecommunications, datacom, and measurement equipment, and are compatible with FC/PC, FC/SPC, and FC/UPC polish types for varying performance levels (insertion loss typically below 0.5 dB) .

Using Bare Fiber Adapters

To connect a bare fiber to an FC interface, you can use a bare fiber adapter or terminator. These devices allow temporary or in-situ connections without permanently attaching a connector to the fiber. Key features include:

- **Fiber Securing:** The bare fiber is held in place using a precision foam pad or spring-loaded clamp to prevent bending or stress .
- **Compatibility:** Adapters can accommodate single-mode or multimode fibers with...
