

# Base station optical cable remote monitoring type

## Overview

A remote fiber test system (RFTS) enables the oversight of an entire fiber optic network, including dark fiber, from a central location. Intelligent OTDR-based solution for testing and monitoring fiber links (P2P and PON) from buildout to maintenance. Compact, high port-density local or. Experience advanced network management with the Remote Fiber Monitoring System (RFMS) – the premier solution for 24/7 fiber quality monitoring. Designed to keep NOC (Network Operation Centre) operators and field technicians informed, the RFMS diligently detects fiber-related issues such as cuts. Get the Power: Scale up your fiber network quickly, deploy and monetize high-speed quality service, and cut workloads to maximize team efficiency. Automate optical network monitoring with the most compact. EXFO's remote fiber testing & monitoring solutions are built based on fixed OTDR test equipment placed at strategic central locations across the network.
