

Basic Principles of Relay Protection Experiments

Overview

This report presents the theory and application of two ubiquitous protection schemes, overcurrent protection and differential current protection, with the design of experiments and exercises for electrical engineering students. This handbook covers the code of practice in protection circuitry including standard lead and device numbers, mode of connections at terminal strips, colour codes in multicore cables, dos and donts in execution. The objective of this undertaking is educational, so that students can. To introduce all kinds of circuit breakers and relays for protection of Generators, Transformers and feeder bus bars from Over voltages and other hazards. To describe neutral grounding for overall protection. Proficient in all ABB/GE medium and low voltage distribution products. Product Specialist (West Region) for Digital.
