

Building-specific mesh cable trays

Article Overview

Mesh cable trays are constructed from electro-welded steel wires to form a ventilated, modular support system for routing and securing electrical cables.

Overview

Mesh cable trays, also known as wire mesh or basket trays, are designed to support, protect, and organize electrical cables in industrial, commercial, and infrastructure applications. They provide high load capacity, excellent ventilation, and flexibility for routing cables in multiple directions .

Materials and Finishes

- Steel or stainless steel is commonly used, with options for pre-galvanized, hot-dip galvanized, or stainless steel (AISI 316L) for corrosion resistance .
- Aluminum alloys may be used for lightweight applications with good corrosion resistance .
- Electro-welded wires form the tray mesh, ensuring rigidity and continuous ventilation for cables .
- Edges are often rolled or curled (Safe-T-Curl) to protect cables and installers during handling .

Components

A complete mesh cable tray system includes:...
