

Bus arc flash protection price

Article Overview

Bus arc flash protection systems typically range from \$1,800 for basic studies to \$20,000+ for complex installations, while individual arc flash relays can cost from a few hundred to several thousand dollars depending on features and channels.

Arc Flash Study Costs

Implementing bus arc flash protection often begins with an arc flash study, which evaluates your electrical system and determines the necessary protective measures. Costs for these studies vary widely based on system size, bus count, and complexity. Typical ranges in the U.S. are \$1,800 to \$8,000 for smaller facilities and \$4,000 to \$20,000+ for larger industrial plants with multiple buses, switchboards, and fault scenarios. Factors influencing cost include:

- Number of buses and panels to model
- Field verification of equipment
- Complexity of the electrical system (generators, tie breakers, multiple sources)
- Inclusion of PE-stamped reports and labeling
- Travel and regional labor rates

Arc Flash Relays and Monitoring Devices

For direct bus protection, arc flash relays or monitoring systems are installed to detect and clear faults quickly. Examples include:

- AFR-M Busbar Arc Flash Protection Relay: Designed for LV and MV switchgear, sup...
