

CE Certified SD-WAN Device 400G

Article Overview

Cisco and Versa offer certified SD-WAN devices capable of 400G throughput for enterprise and data center deployments.

Cisco 400G SD-WAN Devices

Cisco provides high-density 400G SD-WAN routers designed for large branches, campuses, and data centers. These devices support segment routing, SLA-based services, and scalable routing systems, enabling enterprises to handle high-throughput traffic while maintaining security and multicloud connectivity . Cisco's SD-WAN portfolio also integrates advanced security, AI-driven performance optimization, and post-quantum cryptography, making it suitable for mission-critical applications and long-term network growth .

Versa Networks Certified Appliances

Versa Networks offers certified SD-WAN white-box appliances that are preloaded with Versa Operating System (VOS) software. These appliances must pass the Versa Platform Qualification Service, ensuring they meet performance and reliability standards. Vendors include Advantech, Caswell, Dell, Lanner, and Silicom, and certified models are listed in the Versa Certified Appliance catalog . While Versa does not explicitly list 400G throughput for all models, their high-performance appliances are designed for enterprise-scale SD-WAN deployments and can be paired with high-capacity hardware to achieve multi-hundred-gigabit performance.
