

Cable Tray Fixture Specifications

Article Overview

Cable tray fittings are essential components for cable management systems, and their specifications vary based on type, material, and application.

Types of Cable Trays

- **Ladder Tray:** Commonly used for supporting and managing large bundles of cables. It features a ladder-like structure that allows for air circulation and heat dissipation. The fittings for ladder trays include connectors, elbows, and tees, which are designed for easy assembly and modification .
- **Solid Bottom Tray:** This type provides a flat surface for cable support and is often used in environments where dust and debris are a concern. Fittings include covers and end caps to protect cables from external elements .
- **Wire Mesh Tray:** Made from welded wire, this tray is lightweight and allows for easy cable management. It is often used in data centers and industrial applications. Fittings include brackets and connectors for secure installation .

Material Specifications

- **Steel:** Commonly used for its strength and durability. Steel trays can be galvanized or painted for corrosion resistance. Stainless steel options (304 and 316 grades) are available for environments prone to corrosion .
- **Aluminum:** Lightweight and resistant to corrosion, aluminum trays are suitable for various environments, especially where weight is a concern .
- **Fiberglass:** Used in corrosive environments, fiberglass trays offer high resistance to chemicals and are non-conductive
