

Cable tray cut at right angle

Article Overview

To cut a cable tray at a precise 90-degree angle, mark the cut line accurately, secure the tray, use the appropriate saw, and deburr the edges for safety.

Step-by-Step Guide

1. Gather Tools and Safety Gear

- Measuring tape: For accurate measurements.
- Marker or chalk: To clearly mark the 90-degree cut line.
- Saw: Use a hacksaw for thin metal trays or a power metal-cutting saw for thicker trays. Metal cutting snips can help with small adjustments.
- Clamps or vise: To hold the tray firmly in place during cutting.
- Personal protective equipment (PPE): Safety glasses, gloves, and hearing protection are essential.
- Deburring tool or metal file: To smooth sharp edges after cutting.
- Optional: Cutting oil for smoother cuts on thicker trays.

2. Measure and Mark the Cut

- Use a protractor or angle finder to ensure the line is exactly 90 degrees.
- Double-check measurements before cutting to avoid errors.

3. Secure the Cable Tray

- Place the tray on a stable surface.
- Use clamps or a vise to prevent movement, which ensures a straight cut and reduces the risk of injury.

4. Make the Cut

- Follow the marked line carefully.
- For power saws, move slowly and steadily to maintain a clean edge....
