

Cable tray elbows and tees

Article Overview

Cable tray elbows and tees are essential fittings that allow directional changes and branching in cable tray systems, ensuring safe, organized, and code-compliant cable routing.

Cable Tray Elbows

Elbows are used to change the direction of a cable tray run. They come in two main types:

- **Horizontal Bends:** These change the tray direction on the same plane, typically available in 30°, 45°, and 90° angles. They are used to navigate around walls, columns, or other obstacles without interrupting the cable path .
 - **Vertical Bends (Risers):** These allow the tray to move between different elevations, such as from floor to ceiling or between floors. Vertical bends are critical for maintaining proper cable support and avoiding sharp bends that could damage conductors .
- Installation Tips: Ensure the bend radius meets the minimum requirements for the cable type to prevent stress or insulation damage. Ladder trays, for example, provide smooth rungs that help maintain gradual bends .

Cable Tray Tees and Crosses

Tees and crosses are used to create branches in the cable tray system:

- **Tees:** Allow a single branch to split off from the main run, directing cables to a different area or equipment rack....
