

Cable tray tee tilting up and down

Article Overview

Cable tray tees can be installed with vertical bends or risers to tilt up or down, allowing smooth transitions between different elevations while maintaining cable integrity.

Understanding Tilting Tees

Cable tray tees, also called junctions, allow cables to branch into multiple directions. When a tee needs to tilt up or down, it is typically combined with vertical bends or riser links to guide cables smoothly between different heights or slopes in the system. This ensures cables are not stretched, pinched, or damaged during elevation changes.

Types of Adjustable or Tilting Tees

- **Fabricated Tees (EzyTray ET range):** These use accessories like TX brackets and riser links to create a tee that can rise or descend. The side walls of the tray are cut and bent, and riser links are installed in pairs to support the vertical transition.
- **Pre-manufactured Vertical Tees:** Some manufacturers, such as Eaton B-Line, offer vertical tee fittings designed to connect trays at different elevations without custom fabrication.
- **Horizontal and Vertical Bend Combinations:** By combining a horizontal tee with vertical bends, installers can achieve a controlled tilt in the tee section, maintaining proper bend radius for cable protection.
