

Cable tray wall bend fabrication

Overview

The bends, tees, crosses, risers and reducers of wire mesh cable tray can be easily and quickly made live at the project by using a bolt cutter. Since the jaws of the bolt cutter drags a layer of zinc across the cut end and forms a protective layer. more description of how to fabricate a 200 mm cable tray bend in English: How to Fabricate a 200 mm Cable Tray Bend – Description Fabricating a cable tray bend is a process. Always use 2 splice plates per length of tray and SBH and CNH splice nuts and bolts to fasten them in place. EzyStrut splice bolts have a smooth head which should be installed on the inside of the tray's side wall. The SBH's smooth head is specially designed so it cannot damage any cables. The method gives details of how the work will be carried out andB manufactures its cable tray in a range of materials with a variety of finishes. When a wire cable tray is cut, the fact that a. OBO BETTERMANN has offered prod-ucts and solutions for electrical instal-lation for over 100 years.

Working with EzyTrays

Splice to Create A Straight Join
Install A Radius Plate to Create A Bend
Using Hold Down Units to Secure The Tray
Using The TX Brackets to Create Tee Or Cross Style Joins
Using Riser Links to Make Either Internal Or External Risers
The TX bracket allows you to fabricate tee or cross combinations in the ET/ET3/ET5 tray. Simply make the appropriate cuts in the side wall of the tray you are joining a length to, bend down the side wall, and attach a TX bracket either side.
