

Cable trays for power plants in the Philippines

Article Overview

Cable trays in Philippine power plants are typically heavy-duty, corrosion-resistant ladder or perforated trays designed to support high-voltage power and control cables while ensuring safety, ventilation, and easy maintenance.

Types of Cable Trays

For power plants, the most commonly used cable trays include:

- **Ladder Cable Trays:** Ideal for heavy power cables, providing excellent support and ventilation to prevent overheating. Suitable for long spans and high-load installations in industrial environments .
- **Perforated Cable Trays:** Offer a balance of support and airflow, allowing heat dissipation while maintaining structural integrity. Often used for medium to heavy-duty cables .
- **Solid Bottom Trays:** Provide maximum protection against dust, debris, and moisture, suitable for sensitive control or communication lines within power plant control rooms .

Materials and Features

- **Metal Trays:** Typically made from galvanized steel or aluminum, offering high strength, durability, and resistance to mechanical stress. Hot-dip galvanized trays are preferred in harsh or coastal environments for superior corrosion resistance
