

Can Huawei OLT optical modules be used with Huijue

Article Overview

Huawei OLT optical modules are generally designed to work only with Huawei-certified modules, and using non-Huawei modules like Huijue may cause reliability issues unless the devices support standard GPON interoperability.

Huawei Optical Module Requirements

Huawei switches and OLTs require Huawei-certified optical modules to ensure transmission reliability and service stability. Non-certified modules may trigger alarms, cause data bus suspension, or even damage optical interfaces due to differences in structure, size, or electrical design . Certification involves comprehensive testing of plug/unplug functionality, optical power, signal quality, error tolerance, compatibility, EMC, and environmental parameters . Therefore, using a Huijue optical module in a Huawei OLT is not officially supported and may lead to operational risks.

Third-Party ONU/OLT Interoperability

Despite Huawei's certification requirements, GPON standards allow some level of interoperability. Many third-party ONUs, including those from Huijue, can register and operate on Huawei OLTs if they follow GPON and OMCI standards . Success depends on:

- Firmware compliance: The ONU must implement OMCI correctly and support Hua...
