

Can I use a fiber optic cable without connecting it to a router

Article Overview

You cannot fully use fiber optic internet without a router if you want to connect multiple devices or use Wi-Fi, but a single device can sometimes connect directly to the ONT.

How Fiber Optic Internet Works

Fiber optic internet uses a fiber optic cable to transmit data as light signals. Unlike cable or DSL, it does not require a traditional modem. Instead, your Internet Service Provider (ISP) installs an Optical Network Terminal (ONT), which converts the optical signals into digital Ethernet signals that your devices can understand . The ONT is essential for connecting your home network to the ISP.

Role of a Router

While the ONT provides the internet signal, a router is needed to distribute that connection to multiple devices and provide Wi-Fi. Without a router, you can:

- Connect only one device directly to the ONT using an Ethernet cable.
- Miss out on Wi-Fi connectivity for phones, tablets, and laptops.
- Lack the security features a router provides, such as a firewall and DHCP for assigning IP addresses .
