

Can a fiber optic cable connect two routers

Article Overview

Yes, a fiber optic cable can be used to connect two routers, typically via an Optical Network Terminal (ONT) or through a switch, with proper configuration.

How It Works

Fiber optic internet delivers data as light signals through glass or plastic strands, which are converted to electrical signals by a fiber modem or ONT. This device acts as the bridge between the fiber line and your routers, allowing Ethernet connections to be established for network devices .

Common Setup Methods

- Primary Router as Gateway
- Connect the fiber optic cable to the WAN port of the primary router.
- The primary router manages the internet connection and assigns IP addresses.
- Connect the second router to a LAN port of the primary router using an Ethernet cable.
- Configure the second router in Access Point (AP) or Bridge Mode to avoid conflicts like double NAT .
- Using a Switch
- If multiple routers need independent connections, a fast Ethernet switch can be installed after the ONT.
- Each router connects to a separate port on the switch....
