

Can connect to fiber optic router

Article Overview

You can connect a fiber optic internet connection to your router using an Optical Network Terminal (ONT) and an Ethernet cable to bridge the optical signal to your router.

Required Equipment

- Optical Network Terminal (ONT): Provided by your ISP, this device converts the fiber optic signal into an electrical signal that your router can use .
- Fiber Optic Cable: Usually supplied by your ISP, with connectors like SC/APC or SC/UPC .
- Router: Ensure it has a WAN or fiber-compatible port. Some routers have SFP slots for direct fiber input .
- Ethernet Cable (Cat5e, Cat6, or Cat6a): Connects the ONT to your router for high-speed data transfer .

Step-by-Step Connection

- Install the ONT: Place the ONT near the fiber entry point in your home or office. Mount it on a wall or stable surface .
- Connect the Fiber Cable: Carefully insert the fiber optic cable into the ONT's designated port. Handle the connector by its plastic housing to avoid damage, and ensure it clicks securely .
- Power On the ONT: Plug in the ONT and wait for the status lights to stabilize, which may take a few minutes .
- Connect the ONT to the Router: Use an Ethernet cable to link the ONT's Ethernet/LAN port to the WAN or Internet port on your router
