

Can the 360 router be connected to fiber optic cable

Article Overview

A 360 router can be connected to fiber optic internet, but it must go through an Optical Network Terminal (ONT) using an Ethernet cable.

How Fiber Internet Works

Fiber optic internet transmits data as light signals through glass or plastic fibers, which standard routers cannot interpret directly. The fiber line terminates at an Optical Network Terminal (ONT), a device provided by your ISP that converts the optical signal into an electrical Ethernet signal compatible with home networking equipment .

Connecting Your 360 Router

- **Confirm ONT Installation:** Ensure your ISP has installed and activated the ONT at your home .
- **Use an Ethernet Cable:** Connect the ONT's Ethernet output port to the WAN (Internet) port on your 360 router .
- **Power On Devices:** Plug in the ONT first, wait for it to stabilize, then power on your router .
- **Configure Router Settings:** Access the router's admin panel to set up VLAN, DHCP, or PPPoE settings if required by your ISP .
- **Test the Connection:** Verify internet speed and connectivity to ensure the router is handling the fiber connection properly
