

Category 7 Shielded Patch Panels

Article Overview

Cat7 shielded patch panels provide high-speed, EMI-protected connectivity for structured cabling in enterprise and data center networks.

Overview

Category 7 (Cat7) shielded patch panels are designed for high-speed network environments, supporting up to 10 Gigabit Ethernet and frequencies up to 600 MHz. They are equipped with shielded twisted-pair (STP) ports, which include a metal grounding layer to protect against electromagnetic interference (EMI) and radio frequency interference (RFI), making them ideal for high-density installations, industrial environments, and data centers .

Key Features

- **Port Density:** Available in 24-port or 48-port configurations, often in a 1U rackmount form factor, allowing efficient use of rack space .
- **Shielding:** Each port is shielded (FTP/STP), ensuring signal integrity in environments with high interference .
- **Termination:** Uses IDC/LSA connectors or tool-free pass-through designs for quick and reliable cable termination .
- **Cable Management:** Many panels include stiffened shelves, brackets, or integrated cable organizers to maintain neat and stable cabling .
- **Compatibility:** Backward compatible with Cat6 and Cat6a cabling, allowing gradual network upgrades without replacing existing infrastructure .
- **Mounting:** Standard 19-inch rack or cabinet mounting, suitable for enterprise netw...
