

Check the version of the fiber optic switch

Article Overview

You can check the system version of a fiber optic switch using device-specific commands such as show version on Cisco switches or display version on Huawei switches.

Cisco Switches

For Cisco switches, including Catalyst and MDS Fibre Channel models, you can use the following commands in the CLI:

- show version - Displays the current software version, uptime, switch model, and memory information, providing a complete overview of the active system configuration (Cisco Catalyst) .
- show running-config - Shows the configuration currently running in memory.
- show startup-config - Displays the configuration that will load on reboot.
- show inventory - Lists hardware components, modules, and serial numbers.
- show environment - Checks the health of the switch, including fan, temperature, and power supply status . For Cisco MDS Fibre Channel switches, additional commands include:
- show system - Provides software and hardware version details, uptime, and last reload reason.
- show module - Displays installed modules and their firmware versions.
- show version - Confirms the Fabric OS version and active firmware partitions
