

Chilean Telecom Backbone Fiber Optic Cable Distribution

Article Overview

Chile's telecom backbone is expanding through domestic fiber networks and international subsea cables, including the Humboldt Cable linking South America directly to the Asia-Pacific region.

Domestic Fiber Backbone

Chile's domestic fiber optic infrastructure is anchored by two major projects:

- Fibra Óptica Austral (FOA): Nearing completion, this network connects the far south of Chile, covering remote regions and enhancing connectivity for local communities and industries .
- Fibra Óptica Nacional (FON): Planned to complement FOA, this network will extend fiber coverage across central and northern Chile, though construction has not yet started . Together, these networks will deploy approximately 14,000 kilometers of fiber, forming the backbone for national telecommunications, supporting internet, cloud services, and enterprise connectivity .

International Subsea Connectivity

Chile is also investing in transoceanic fiber optic cables to strengthen its global digital presence:

- Humboldt Cable: A 14,800-kilometer submarine cable connecting Valparaíso, Chil...
