

Classification of Dutch Fiber Optic Switches

Overview

Wavelength Selective Switches (WSS) and MEMS Optical Switches account for approximately 55–65% of market value, reflecting the dominance of flexible-grid, software-defined optical networking in the Dutch backbone and data center interconnect (DCI) segments. NATO Supply Class 6021 is a classification within NATO Supply Group 60, which is dedicated to Fiber Optics Materials, Components, Assemblies, and Accessories. Fiber optic switches are devices used in fiber optic networks to control the flow. This guide provides a comprehensive classification of fiber optic optical switches for B2B buyers, detailing their core features—enabling optical signal routing without photoelectric conversion—and the market growth context. It categorizes various types of optical switches by switching mechanism. The term fiber optic switch can refer to two different types of devices. 5 billion in 2024 and is projected to hit \$12. Its core functionalities include: (1) Signal Blocking/Transmission: Interrupting or permitting light passage through a specific channel.
