

Cold aisle partitions for computer rooms

Overview

Containment panels or strips create a partition to isolate either the server supply air (cold aisle) or the exhaust air (hot aisle). Preventing the supply and exhaust air from mixing significantly increases the capacity and cooling efficiency of the cooling infrastructure. Build-to-suit aisle containment solutions. By isolating the cold aisle, containment reduces unintended mixing of cold supply air with hot exhaust air, maintaining uniform, predictable. Armstrong aisle containment combines flexible design, strategic sourcing, and American manufacturing to deliver solutions that ensure long-term performance in a rapidly evolving digital world. Armstrong aisle containment solutions provide high-performance systems that support efficient, scalable. Freestanding, Rack-independent system with the flexibility to maximize efficiency and capacity from the core to the edge for raised floor and slab data centers.
