

Common types of pigtail connectors include

Article Overview

Pigtail connectors come in three main types: electrical/automotive, fiber optic, and RF/coaxial, each designed for specific applications and connection methods.

Overview

A pigtail connector is a short cable with a pre-installed connector on one end and a bare or stripped wire, fiber, or conductor on the other. This design allows for splicing, crimping, soldering, or fusion into a system where direct termination is impractical or unreliable. Pigtail connectors are widely used in electrical wiring, telecommunications, data centers, automotive systems, and RF applications.

1. Electrical / Automotive Pigtails

Electrical pigtails are used to connect multiple wires to a single device terminal or extend circuits. Common types include:

- Ring terminals: For screw connections to devices or panels.
- Fork (spade) terminals: Allow easy attachment under screws without complete removal.
- Quick-disconnect (blade) terminals: Enable fast plug-in connections.
- Butt splice connectors: Join two wires end-to-end.
- Bare stripped ends: For wire nut splices or soldering. These connectors are typically made of copper, stranded for flexibility, and insulated with PVC or cross-link...
