

Configuration of Fiber Ports on 3560 Switch

Article Overview

To configure a fiber SFP port on a Cisco 3560 switch, you need to insert the SFP module, configure the interface, set speed/duplex if required, and assign VLAN or trunk settings as needed.

Step 1: Insert the SFP Module

- Ensure the switch is powered on and compatible SFP modules (single-mode or multi-mode) are used.
- Insert the SFP module into the desired SFP port on the 3560 switch.
- Connect the fiber optic cable to the SFP module, ensuring proper LC/SC connectors and matching fiber type at both ends .

Step 2: Access the Switch CLI

- Connect via console, SSH, or Telnet to access the switch command-line interface.
- Enter privileged EXEC mode using enable and then global configuration mode with configure terminal .

Step 3: Configure the SFP Interface

- Identify the SFP interface, typically GigabitEthernet1/0/x or FastEthernet1/0/x depending on the model.
- Enter interface configuration mode:....
