

Connection diagrams for two sets of the same type of cable trays

Article Overview

Two sets of the same type of cable trays can be connected using straight sections, splice plates, and appropriate fittings while ensuring proper alignment, support, and cable management.

Key Components for Connecting Cable Trays

- **Straight Sections:** These form the main runs of each tray set and are connected end-to-end using splice plates to maintain structural integrity and alignment .
- **Splice Plates:** Metal plates that join two straight sections securely. They are bolted to the tray flanges to ensure stability and continuity .
- **Fittings:**
 - **Horizontal Bends:** Allow the tray to change direction on the same plane (e.g., 30°, 45°, 90°).
 - **Vertical Bends (Risers):** Enable elevation changes between tray sets.
 - **Tees and Crosses:** Facilitate branching or merging of two tray sets .

- **Supports:** Trapeze hangers, wall brackets, or center-span supports anchor the trays to the building structure, ensuring proper load distribution and preventing sagging .
- **Covers and Hold-Down Clamps:** Protect cables from dust, moisture, and physical interference, especially when trays are stacked or run in parallel .

Connection Diagram Considerations

- **Parallel Runs:** When two sets of trays run side by side, maintain a minimum spaci...
