

Convert the fiber optic box into a router

Article Overview

You cannot directly turn a fiber optic box into a router; you need an Optical Network Terminal (ONT) or media converter to convert the optical signal into an electrical signal that a router can use.

Understanding the Components

- **Fiber Optic Box / ONT:** This device converts the incoming fiber optic light signals into electrical signals compatible with standard networking equipment. Most ISPs provide an ONT for residential or business fiber connections .
- **Media Converter:** If your fiber box does not include routing capabilities, a media converter can bridge fiber to Ethernet, allowing a standard router to connect via its WAN port .
- **SFP/SFP+ Modules:** Some routers or switches have SFP ports that accept transceivers to convert fiber signals directly to electrical signals for network devices .

Steps to Connect Fiber to a Router

- **Check Your Fiber Box Type:** Determine if your fiber box is an ONT or a passive fiber termination unit (FTU). An ONT actively converts optical signals, while an FTU is passive and requires a separate converter .
- **Use an ONT or Media Converter:**
 - If your ISP provides an ONT, connect the fiber cable to the ONT.
 - If you have a passive fiber box, use a media converter or a router with an SFP port and compatible transceiver to convert the optical signal to Ethernet .
- **Connect to Router:** Run an Ethernet cable from the ONT or media converter to the...
