

Correct placement of network cabinet equipment

Article Overview

Proper placement and setup of network cabinet equipment ensures organized, safe, and efficient network operation.

Choosing the Right Cabinet

Select a cabinet based on your equipment size, weight, and future expansion needs. Floor-standing cabinets are ideal for larger setups with multiple servers and switches, while wall-mounted cabinets suit smaller offices or limited spaces . Ensure the cabinet is durable, secure, and certified, with lockable doors and side panels for safety .

Cabinet Placement

- Location: Choose a central, accessible area with adequate ventilation, away from heat, moisture, or direct sunlight .
- Spacing: Maintain at least 1 meter clearance in front of the cabinet for maintenance; deeper equipment may require 1.3 meters .
- Alignment: Arrange cabinets with similar equipment in rows for aesthetics and easier management .
- Raised Floors: If applicable, place cabinets close to walls to improve stability and safety .
- Airflow: Use blanking panels to prevent hot and cold air mixing, improving cooling efficiency .
