

Cost of Remote Monitoring of Wiring Units

Article Overview

The average cost of remote monitoring for wiring units ranges from \$20 to \$80 per device per month, with additional costs for hardware, software, connectivity, and support.

Cost Components

-

Hardware: Remote monitoring systems typically include sensors, data collection units, and sometimes Remote Terminal Units (RTUs). Entry-level RTUs for small sites can cost less, providing basic monitoring for temperature, humidity, or equipment status with 2-16 inputs. Mid-range RTUs supporting 16-64 I/O points and advanced protocols like SNMP, Modbus, or DNP3 are more expensive but offer greater scalability and integration options .

-

Connectivity: Devices require a communication layer to transmit data to central control software. Costs vary depending on network type (cellular, Wi-Fi, or proprietary IoT networks) and data usage .

-

Software and Platform Fees: Central dashboards, alert logic, and user management platforms often involve recurring subscription fees. These fees can significantly influence long-term costs, especially for large deployments
