

Costs of long-span cable trays in Equatorial Guinea

Article Overview

Long-span aluminum cable trays in Equatorial Guinea typically cost between \$6 and \$30 per meter, depending on material, size, and installation requirements.

Material and Type Considerations

Long-span cable trays are often made from extruded aluminum, which offers a high strength-to-weight ratio and good corrosion resistance, making them ideal for industrial and commercial applications such as oil and gas, mining, and infrastructure projects . Ladder-style trays with H-beam side rails are common for long spans, reducing the number of supports required and lowering installation costs . Standard widths range from 12" to 36", with rung spacing options of 6", 9", or 12" .

Price Range

The cost of cable trays varies by material and design:

- Aluminum trays: \$6-\$30 per meter, suitable for outdoor or corrosive environments .
- Steel trays: \$5-\$25 per meter, widely used for general-purpose installations .
- FRP trays: \$10-\$50 per meter, for highly aggressive environments .
- Pre-galvanized steel: lower upfront cost but less durable in corrosive areas . Long-span trays reduce the number of supports, which can lower overall project costs compared to standard trays, especially for spans of 40 ft (12.2 m) or more
