

Custom Requirements for Residential Distribution Boxes

Article Overview

Custom-made residential distribution boxes must comply with IEC 60364 and BS 7671 standards while ensuring safe, accessible, and scalable design tailored to the home's electrical needs.

Regulatory and Safety Standards

Residential distribution boxes must adhere to IEC 60364 (Low-voltage electrical installations) and BS 7671 (UK wiring regulations), which provide guidance on installation, accessibility, and protection . Key requirements include:

- **Accessibility:** Panels must be readily accessible for operation, maintenance, and inspection. Recommended mounting height is 1–1.8 meters, with 1.3 meters suggested for elderly or handicapped users.
- **Clearance and Working Space:** Adequate space around the panel is required to ensure safe access to components.
- **Protection Ratings:** Switchgear should be installed indoors or in cabinets with protection degrees of IP4X, IP5X, or IP6X. Double insulation and covers are mandatory for live parts in metallic enclosures.
- **Environmental Conditions:** Panels should be installed in areas free from water, excessive dust, or other adverse conditions that could compromise safety or performance.

Design and Customization Considerations...
