

Data Center Interconnect LAN

Overview

Cisco DCI (Data Center Interconnect) solutions extend LAN and SAN connectivity across geographically dispersed active data centers. They help organizations provide nonstop access to business applications and information. Cisco DCI solutions offer a scalable, flexible platform by supporting. This topic provides high-level guidance on various methods available through Equinix Fabric to build a Layer 2 Data Center Interconnect (DCI) between two or more Equinix Fabric locations. With availability in over 60 Equinix metros globally, Equinix Fabric offers an automated solution to provision. DCI (Data Center Interconnect): Data Center Interconnect (DCI) is the use of a combination of technology and systems to enable computing inside a data center to be physically separate from one another and interconnected over short to long distances. Instead of routing traffic between sites over the public internet, DCI uses dedicated circuits that provide.
