

Dimensions of Indoor Primary Distribution Box

Article Overview

Indoor primary distribution boxes typically range from 200 × 200 × 120 mm up to 800 × 600 × 300 mm for wall-mounted units, with model-specific variations depending on capacity and installation type.

Typical Sizes and Models

Indoor distribution boxes, such as the TS-DB series, are designed for wire termination in buildings and come in multiple capacities: 10, 20, 30, and 50 pairs using Insulation Displacement Contact (IDC) modules. These boxes can be installed directly on the wall or embedded in the wall, with an additional shell provided for embedded installations. The case, cover, and frame for mounting IDC modules are standard components, and the cover usually includes a locking mechanism for security and controlled access .

Standard Wall-Mount Enclosure Dimensions

For general wall-mounted electrical enclosures, typical dimensions range from 200 × 200 × 120 mm up to 800 × 600 × 300 mm, depending on the number of devices, cable entry space, and future expansion needs. Freestanding cabinets are larger, often 1600–2200 mm in height, 600–1800 mm in width, and 300–600 mm in depth. These dimensions account for external measurements; internal usable space is slightly smaller due to wall thickness, gaskets, and mounting hardware
