

Dimensions of a 20-channel concealed electrical box

Article Overview

A 20-channel concealed electrical box is typically a large multi-gang box, with dimensions scaled to accommodate 20 devices, often requiring a width of 400–500mm, height of 200–250mm, and depth of 55–60mm for European-style installations.

General Considerations

For concealed electrical boxes, internal volume and depth are critical to ensure safe wiring and compliance with standards. Each channel or gang corresponds to a single device (switch, socket, or control module), and the box must provide sufficient space for wire fill, connectors, and future maintenance. Depth is particularly important when multiple wires converge, as shallow boxes can lead to overcrowding and potential fire hazards.

European Standard Dimensions

European concealed boxes follow EN 60670 standards, which specify compact, round profiles for flush wall installations. A typical single-gang box has a diameter of 80mm and a depth of 55mm. For multi-gang configurations, the width increases proportionally with the number of channels, while the depth generally remains around 55–60mm to maintain compatibility with standard wall finishes and device mechanisms
