

Does the fiber distribution box contain a splitter

Overview

There are splice tray or optical splitter and other accessories in the fiber distribution box. An optical distribution box can have 24 port, 16 port, 8 port and other choices. Designed for distributing optical signals from feeder cables to multiple drop cables in FTTH networks. Located at distribution points in FTTH, such as corridors, small community telecommunication. Splitter Distribution Box integrates fiber termination, splicing, distribution, and especially PLC optical splitter installation. Features ● Supports PLC splitters (tube type or ABS cassette). Fiber closure protects spliced fibers in backbone and feeder lines, fiber box (or fiber distribution box) organizes and splits fibers in communities or buildings, and fiber terminal box provides the final termination for indoor drop cables.
