

Does the fiber optic panel need a socket and how should it be connected

Article Overview

To connect a fiber optic panel socket, carefully terminate the incoming fiber, splice it to a pigtail, insert the connector into the socket adapter, and connect your ONT or router while maintaining proper bend radius and dust protection.

Step-by-Step Guide

1. Confirm ISP Requirements Check your ISP's specifications for connector type (commonly SC/APC for GPON networks) and ONT location. Ensure the socket is within 3 meters of the ONT for optimal performance . 2. Choose Installation Location Select a dry, accessible wall near power outlets. Avoid areas where the fiber path may bend sharply or be exposed to physical damage . 3. Prepare the Wall Socket

- Cut a hole in the wall according to the back box template (typically 60mm x 40mm).
- Secure the back box with screws, ensuring a depth of at least 40mm . 4. Prepare the Fiber Cable
- Strip approximately 30cm of the incoming fiber jacket.
- Clean the fiber with alcohol wipes.
- Cleave the fiber at a precise angle ($\leq 0.5^\circ$) to ensure minimal signal loss . 5. Splice the Pigtail
- Fusion-splice the incoming fiber to a pre-terminated pigtail inside the back box.
- Coil any excess fiber inside the box, maintaining a minimum bend radius of 30mm to prevent damage . 6. Connect the Fiber to the Socket...
