

Dominic Anti-corrosion Cable Tray Cost Standard

Article Overview

Anti-corrosion cable trays, such as hot-dip galvanized or stainless steel types, follow IEC 61537 and GB/T standards, with costs varying by material, size, and coating thickness.

Cost Overview

The price of anti-corrosion cable trays depends on material type, tray style, and length. For example:

- Hot-dip galvanized ladder trays (standard 2.4m length) are commonly used and priced per tray or fitting, with costs influenced by zinc coating thickness and steel gauge .
- Stainless steel trays (304 or 316 grade) are more corrosion-resistant and suitable for harsh environments like offshore, chemical, or marine applications. Prices are higher due to material cost but offer long-term durability and low maintenance .
- Typical tray widths range from 50mm to 1200mm, thickness from 0.5mm to 3mm, and lengths from 1m to 6m, affecting the final cost .

Anti-Corrosion Standards

Anti-corrosion performance is critical for cable trays, especially in coastal, industrial, or outdoor environments. Key standards include:...
