

Dual LC optical modules divided into A and B

Overview

A duplex link has to be Tx→Rx and Rx→Tx: two conventions exist. Found in passive FTTH drops where the OLT port always faces the left side of the splice tray. Type-B (cross): position-1 to position-2. Used for wiring two active. This article explains what Duplex LC connectors are, how they work, the difference between single-mode and multimode use, how to choose and maintain them, and why they remain central to fiber network design. The package space saved means 4x more ports on the same patch panel; data-center managers know that is measured in rack units furniture and cubic feet of cooling. The transceiver modules available for Aruba products use the following types of connectors: Single LC connectors (also known as Simplex) are typically used for BiDi (BiDirectional) optics. It covers LC connectors, LC patch cables, uniboot designs, armored. An SFP duplex LC connector is a fiber optic interface used in many small form-factor pluggable (SFP) optical transceivers to enable full-duplex optical communication. A tariff of 8% may be applied if shipping to the United States.
