

E3X-HD10 Fiber Optic Sensor Debugging Instructions

Article Overview

To debug the Omron E3X-HD fiber optic sensor, follow systematic checks for power, fiber alignment, sensitivity, and indicator signals while using Smart Tuning and threshold adjustments.

Initial Safety and Setup Checks

- Ensure the sensor is installed by a qualified electrician and powered within the rated voltage; do not use AC supply or exceed voltage limits to avoid malfunction or fire ().
- Mount the amplifier unit on a DIN rail and secure it until it clicks; avoid excessive pressure or pulling on the fiber units ($>9.8\text{ N}$) ().
- Keep the sensor away from explosive gases, water, oil, chemicals, and strong electromagnetic fields ().

Fiber Alignment and Connection

- Insert single-core fiber units into the upper hole (emitter) and multi-core fiber units into the lower hole (receiver) for standard models ().
- Use E3X-CN11 (Master) and E3X-CN12 (Slave) connectors for multi-unit setups ().
- Ensure unused connector covers are installed to prevent short circuits or electric shock ().
